Protecting existing business and discovering new revenue opportunities requires reliable contact and relationship information. Many lawyers and other professionals don’t have the time to update and monitor their contacts. As a result, the challenge of maintaining accurate data and understanding the strength of those relationships can cost firms time, resources and business. InterAction IQ helps the firm automatically maintain up-to-date contact information and evaluate relationship strength, reducing the time spent by professionals, secretaries, marketing, IT and administrators on these laborious activities. The result - more accurate and insightful data to protect and grow your business.

**Discover, manage and leverage relationships**

Using the latest technology, InterAction IQ mines InterAction activities and email and calendar items for clues about relationships. IQ’s sophisticated data mining capabilities:

- Discover new contacts and automatically add them to the InterAction database
- Assess the strength of engagements and add the resulting score to the InterAction database
- Provide insights to guide business development and relationship building activities
- Identify gaps in relationships and expose potential risk

It’s a Fact:
The fewer partner contacts a client has, the greater a firm’s risk of losing the client. The risk factor drops to less than 10 percent when clients have relationships with five or more of a firm’s partners.
Contact data you can trust
If you don’t trust the accuracy of your contact data, you can’t make the most of it. LexisNexis® InterAction® IQ cleans and updates your InterAction data using one of the most accurate sources of contact information available -- the signature blocks of emails passing through your firm’s Exchange server. Combined with our world-class data quality tools, InterAction IQ streamlines the entire contact management process, making it more efficient, more reliable and more productive.

Stop wasting billable time
Manually checking and updating contact information is time-consuming and an inefficient use of an administrative assistant’s or professional’s time. By capturing and updating contact data automatically, InterAction IQ allows support staff to attend to their core responsibilities and eliminates the need for lawyers and other professionals to spend billable hours updating contact information themselves.
Fully integrated with InterAction
InterAction IQ is the only passive data management tool that’s fully integrated with InterAction to work with all of your CRM data. Access client contact and relationship information easily via InterAction for Microsoft® Outlook, the InterAction Mobility solution and Web and Windows® clients. And because you control the rules, you can configure InterAction IQ to require review and approval of any changes or to update the InterAction database automatically.

InterAction IQ integrates with InterAction to help firms identify:
• Who in the firm has met with a client or prospect recently
• Which contacts might be most receptive to business development efforts
• Where to develop additional relationships to protect existing business
• Who should make an introduction or lead the effort to land a new client
• Which firm members routinely build the strongest relationships
• Who should step in to protect a client relationship if you lose a key team member

Privacy is a priority
InterAction IQ mines only email headers and signature lines for contact information, never the message body or the subject line. Users can designate specific domains and contacts as private to prevent them from being added to the system and shared with other users.

Put relationships to work
InterAction IQ delivers in-depth relationship insights that can help your firm grow. Protect your high-value business, identify hidden connections and respond to business development opportunities confidently with the intelligent choice in automated relationship management – InterAction IQ.
