How do I search in specific segments?

In Lexis Advance®, all documents of the same type have a common structure, composed of the natural parts or divisions referred to as segments. For example, cases contain name, date, court, opinion, and dissent segments, among others.

You can restrict your search to a specific part or segment of a document, such as the court that heard the case or the judge who wrote the opinion.

Different types of documents have different segments. For example, a case doesn't have the same segments as a newspaper article.

Segment searching is especially useful when you are looking for:

- Opinions written by a particular judge
- Cases involving a specific party
- Cases in which a particular attorney or firm appeared as counsel

Searching in a Specific Segment

1. In the search box, enter your search, beginning with the segment name and followed by your search terms in parentheses. To find opinions written by Justice Sandra Day O'Connor, enter:

Example:

writtenby(o'connor)

2. Click Search.

Segment searches can be run as either a natural language or a Boolean search, depending on the search syntax you use. The table below has examples of segment searches using natural language and Boolean syntax.

To...	Type This
Find cases when you know the party names, using natural language	name(griggs duke)
Find a legal news story when you know the headline, using natural language	headline(michael jackson death)
Find cases when you know the party names, using Boolean syntax	name(griggs and duke)
Find cases involving the right to counsel and heard by either Judge Anderson or Judge	right to counsel and judges(anderson or markey)
Find cases argued by Jensen for which Posner wrote the opinion, using Boolean syntax	writtenby(posner) and attorney(jensen)
