

## Human Attorneys Aren’t Going Anywhere, But Where Will You Fit In With AI

Ready or not, artificial intelligence is coming to a law office near you. Unlike other technological advances, AI has the potential to affect a wide range of tasks performed by attorneys. Starting with legal research, automation and predictive analytics.

### A Challenge For The Legal Industry

Various uses of AI tools in legal services will become more prevalent as AI technologies advance, and law firms’ and attorneys’ abilities to capably employ these new tools will become evermore important in providing higher value to clients. But perhaps the biggest question for the legal industry in light of AI entering our world is how we train the next generation of lawyers. If we accept the premise that we will still need humans in the loop, which the authors do, then this is perhaps the biggest challenge facing our industry in the years to come.
