# Reduce your data, increase your efficiency

Bring case data sets down to size with the latest updates to LexisNexis<sup>®</sup> Early Data Analyzer and LAW PreDiscovery<sup>®</sup> software.

Count on near-duplicate analysis, built-in email threading, Web tools, statistical sampling for early case assessment and more.

Today's rapid expansion of litigation data doesn't have to be overwhelming. By using the latest versions of LexisNexis® Early Data Analyzer and LAW PreDiscovery® software together, you can efficiently cut down non-responsive data, reduce data transfer risk and group information—even email threads and near duplicates—for more effective e-discovery.

# What's new in LexisNexis Early Data Analyzer 1.6?

# Analytics

Now you can benefit from email threading and near-duplicate detection.

- If desired, you can filter by session to reanalyze only specific data.
- Set default filters in advance and apply them when you create a new case.
- You can also set up analytics to disregard email footers in searching for near duplicates.

Email threading is now available in LexisNexis Early Data Analyzer to help reduce your document set and speed review.

Take advantage of a comprehensive range of LexisNexis litigation solutions that work together, helping you achieve success—from early data assessment to discovery, depositions and presentations.

• LexisNexis<sup>®</sup> Early Data Analyzer– Perform early data assessment and identify the most relevant case data as early as possible–before processing data in house or sending it to outside vendors.

**New!** Email threading, near-duplicate detection, speedier exporting and statistical sampling via Web tools

• LAW PreDiscovery® software bring in all of the potential evidentiary documents—paper and electronic—needed throughout the legal discovery process. This software allows teams to further eliminate duplicate, irrelevant and non-responsive files—and then

Near-duplicate analysis also helps you prepare for more efficient, effective review.

# Also in this new release:

- A bar chart on your case dashboard helps identify gaps and trends in imported data
- You can extract extended metadata properties
- You can easily detect compound documents, such as Microsoft® Excel® files within other documents—and just double-click to open

The new bar chart on the case dashboard in LexisNexis Early Data Analyzer helps identify gaps and trends to improve your analysis.

### Performance and processing

- LexisNexis Early Data Analyzer now delivers speedier exporting.
- You gain the ability to view estimated remaining time for analysis, optical character recognition (OCR), indexing and exporting.

processes only the essential data prior to costly document review.

**New!** Helpful export, import and OCR enhancements (see more detail in this document)

Concordance® discovery
 management software and
 Concordance Evolution—Select
 the tool best suited for your case
 size and complexity ... use it to
 organize case data and also search,
 review, produce and securely share
 litigation documents generated
 during the discovery phase.

**New!** Built-in near-duplicate analysis, as well as LAW PreDiscovery integration in Concordance Evolution

- CaseMap<sup>®</sup> case analysis software– Organize, search and share case facts, players and issues, and tie all the facts, issues and evidence together to help develop your case strategy.
- TextMap® transcript management software— ust upload a transcript, and you can easily search, summarize, annotate, issue-code and attach notes to important passages of your case testimony.

**New!** TextMap with full-text searching of annotations and exhibits, dramatically faster indexing and more flexible organization tools

#### Web tools with statistical sampling

Web-enabled LexisNexis Early Data Analyzer 1.6 includes a new **Statistical Review** tab enabling you to create sample sets.

Sets of randomly selected documents created via the Statistical Review tab help you estimate responsiveness and other criteria for early case assessment.

Plus, a new **Explore** tab enables you to drill down into each document and view email threads, near duplicates, metadata, etc. This helps you perform ad-hoc searches and filtering. You can select options other than Boolean filtering, and hits will appear in order of relevance.

As with earlier versions, you can gain insight quickly by applying convenient filters to narrow search results by folder, file, custodian, tags and/or "other search."

In addition, you can explore information not available in the content view, such as formulas in an Excel spreadsheet, by downloading native files in a LexisNexis Early Data Analyzer case from the Web interface.

And you can continue to gain faster response times when viewing data within Web-enabled LexisNexis Early Data Analyzer—especially when working with a large number of search terms, sender domains or file type filter definitions.

- TimeMap<sup>®</sup> timeline graphing tool— Transform case facts into highquality visual timelines in seconds.
- NoteMap® outlining tool—Create easy-to-access outlines and notes to sharpen your case analysis and assessment.
- Sanction<sup>®</sup> litigation presentation software–Quickly assemble documents, exhibits, transcripts, questions, visuals and video ... be ready to present evidence throughout your case.

**New!** A simplified interface and faster performance even with very large files

• LexisNexis® Hosted Litigation Solutions—Benefit from secure, private-cloud solutions designed to reduce risk, decrease litigation costs and increase productivity ... choose from on-demand, caseby-case and full-scale enterprise options.

New! LexisNexis CaseCloud<sup>®</sup>, a secure, off-site data hosting service that lets you share key litigation data and documents with colleagues and co-counsel—even access case analysis, document review and discovery management software directly from the cloud

# What's new in LAW PreDiscovery<sup>®</sup> 6.6?

# Exporting

A new "previous export" option gives you the ability to export just load files, when desired.

- All exports are now tracked.
- You can lay a new load file over an existing one to change fields and add a new format, if desired.

## Importing and OCR enhancements

- Now you can import text when it's not in the same folder as associated images.
- Perform OCR on native files that are images without having to convert them to TIFF files first.

Built-in email threading in LAW PreDiscovery and LexisNexis Early Data Analyzer can take an unstructured collection of emails and email attachments ... organize them into structured conversation threads ...

and identify the "inclusive" emails– those messages that contain all prior message content–to reduce the final number of documents and speed review.

# Experience both tools together.
