

LexisNexis® Early Data Analyzer + LAW PreDiscovery™ software: Discovery Software That Works Together

Discover a powerful, proven 2-step approach to reducing litigation costs and gaining greater control over your discovery data.

Today, even small cases can come with dozens, even hundreds of bankers boxes brimming with documents, spreadsheets, printouts and more—as well as vast quantities of digital information on CDs, DVDs, USBs and hard drives.

To gain greater control of the volume of data, reduce litigation costs and maintain a seamless chain of custody throughout discovery you can use LexisNexis® Early Data Analyzer together with LAW PreDiscovery™ software.

How can you perform data analysis as early as possible?

Use **LexisNexis Early Data Analyzer** to *index, filter and search* your initial data set and reduce the volume of data where it lives—on your network, hard drives, external drives, CDs, DVDs and/or flash drives *before processing it in-house or sending it to outside vendors.*

How can you ensure you process all responsive data—quickly and easily?

Then, use **LAW PreDiscovery™ software**, which works as a “processing engine” to scan, import and process all of the potential evidentiary documents—paper and electronic—needed during legal discovery.

This software allows your team to *further* eliminate duplicate, irrelevant and non-responsive files—and *then process only the essential data.*

Early Data Assessment LexisNexis® Early Data Analyzer

Are you ready for a more efficient way to gather, manage and process relevant data for your case?

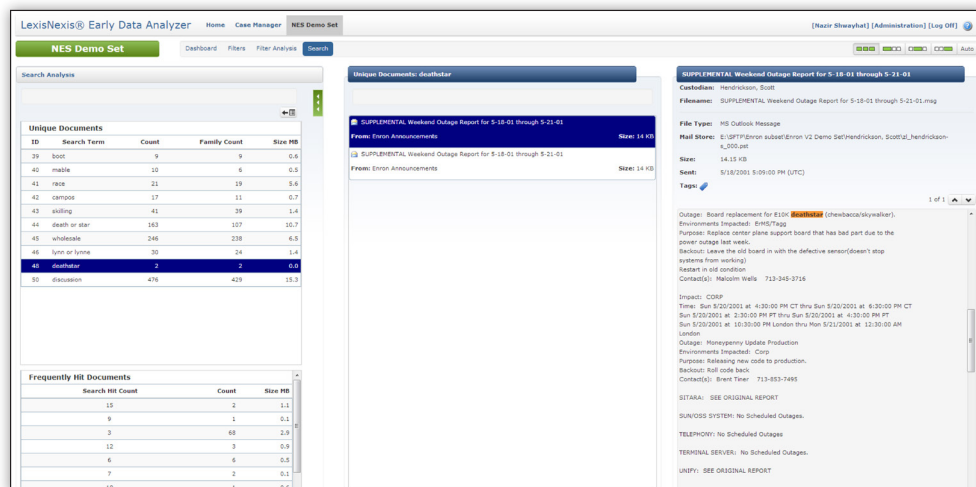

Step 1:

Analyze and reduce your initial data with LexisNexis Early Data Analyzer.

Use *LexisNexis Early Data Analyzer* to analyze your initial data set and reduce the volume of data where it lives—on your network, hard drives, external drives, CDs, DVDs and/or flash drives *before processing it in-house or sending it to outside vendors*.

After you finish, you can easily load the smaller data set into LAW PreDiscovery software.

| | |
|--|--|
| <p>Eliminate duplicate, irrelevant, and non-responsive files</p> | <ol style="list-style-type: none"> Select the source data that needs to be analyzed (on your network, hard drives, external drives, CDs, DVDs and/or flash drives). Load into LexisNexis Early Data Analyzer, which will inventory the data source selected. Index electronic documents, e-mails, and attachments. Filter based on domain, file type, metadata, duplicates, and/or date. Search through the filtered results and then tag the relevant documents for processing. |
| <p>Prepare data before processing</p> | <ol style="list-style-type: none"> Run data reports to prepare for processing and generate reports based on filtering options and search results, demonstrating the risks and potential cost of a matter. |

LexisNexis Early Data Analyzer filters content to help you select only the most relevant documents for your data set.

DID YOU KNOW?

From every 30 gigabytes of discovery data, you can exclude an average of 9 gigabytes of unresponsive data. On average, the typical cost to have an outside vendor process discovery data is \$500 per gigabyte—so for every 9 gigabytes you eliminate up front, you could potentially save \$4,500.*

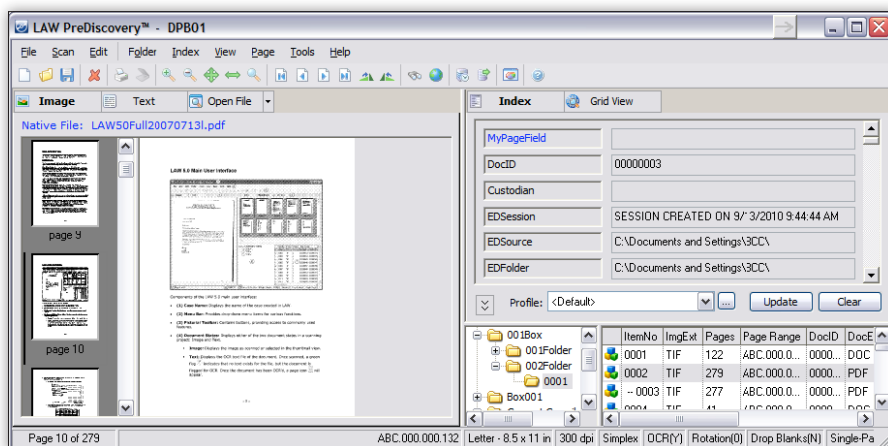

Step 2:

Further reduce data, add paper then process only what is relevant to your case.

If you started your process with Step 1 using LexisNexis Early Data Analyzer, by now you have already set up a case and sent your data to LAW PreDiscovery.

If not, just create a new case in LAW PreDiscovery software, and you're ready to scan paper documents or import emails, electronic documents, images or load files from any media such as CDs, DVDs and hard drives—with ease.
