

Springboro Data Center

The LexisNexis® Global Data Center provides world-class protection for data security

When a data crisis occurs, is your firm prepared to maintain business continuity with effective data backup and protection? Rely on LexisNexis, —a technology provider with 35 years of legal industry experience, strong data management and world-class global data centers—for peace of mind in the area of data backup and protection.

Protect your firm against business interruption, gain higher levels of security and reduce risk exposure by using Lexis® Managed Technology Services—tailored specifically for law firms to ensure systems availability, data security and compliance.

This facility utilizes the next-generation data center model. Its modular components include IT space, power distribution, cooling, uninterruptible power supplies and backup generation—**each individually scalable.**

Benefits include:

- Less complexity
- Higher reliability
- Increased efficiency and utilization
- Improved operational sustainability
- Global standardization
- Data center visibility and intelligence control

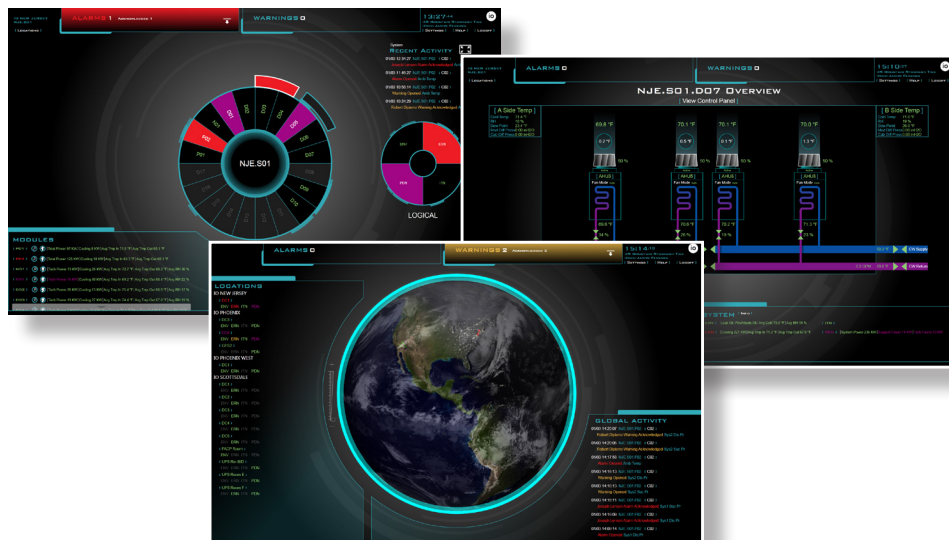

This facility provides you with the capabilities to transform your business with a standardized, secure IO.Anywhere® and IO.OS® enterprise data center platform. You can deploy what you require when you require it. SSAE 16 and Safe Harbor Certified.

Ohio Location

3366 South Tech Boulevard,
Miamisburg, Ohio 45342

Our Ohio Data Center offers a comprehensive package, including:

- Superior power protection
- Two-pronged fire suppression
- Multi-layered building security

Services

The Ohio Data Center serves as a hosting site for law firm data and systems, protecting against business interruptions. Services include:

- **Backup and recovery**—Safeguards data by making multiple on-site and off-site copies to be restored in the event of disaster, data corruption, hardware failure or human error.
- **Replication**—Using real time or near-real time, data is moved to a location outside the primary storage system or to another facility to allow for quick restoration in the event of physical damage to systems and buildings.
- **Security**—Applies best practices and security technology to the storage system to augment server and network security measures.
- **Systems and application management**—Exceptional service delivery with 100 percent satisfaction rates for management of law firm systems and applications.
- **Network services**—Network design and consulting, validation and testing, implementation, management and monitoring.

Power

Power protection maintains reliable data security.

- Core power is provided by a 2,500-kVA transformer; upgradeable to a second 2,500-kVA transformer.
- For each compartment, we offer up to 1,500 kW of power.
- Power density is up to 1,000 W/sq. ft.
- We provide up to 5 MVA of UPS power conditioning.
- Two 1-MW Caterpillar® backup generators are present, with fuel storage for a minimum of 72 hours.

Cooling

Cooling system is efficient and effective.

- Features compartmentalized, redundant 1,200-ton chilled water cooling system.
- Modules contain up to 16, 10-ton air handling units.
- Features welded bi-directional piping design.
- Humidification provided by steam canister in module.
- Leak detection conducted via rope-style outside module and spot-leak detection inside module.
- Efficiency is achieved via waterside economization, variable speed chillers, pumps, fans and small-compartment cooling.

Fire Protection

Fire protection is focused on detection and suppression.

- The building offers HSSD fire detection.
- Fire suppression is via Clean Agent Gas.

24/7/365 Data Center and Network Operations Support

On-site duty staff provides 24/7 smart remote hands and technical support.

- Monitor and report on system utilization and health based on metrics via a variety of SNMP-based tools.

- Monitor and take corrective actions as required to ensure that environmental conditions are within prescribed limits.
- Assist security in escorting customers and service vendors.
- Log trouble reports.

Security

Security measures allow for appropriate 24/7/365 access as your needs dictate.

- This facility is SSAE 16 and Safe Harbor certified.
- Guard staff is on-site at all times.
- The building has all-day, every-day digital video surveillance.
- Biometric screening provides an additional level of protection.

Telecommunications

We offer flexible services for your specific needs.

Our Data Center and Network Operations Support offers 24/7/365 fully managed technology and telecommunication services. On-site duty staff provides 24/7 smart remote hands and technical support.

- The facility offers dual entrances for local carrier access. In addition, diverse in-house cabling to the meet-me-room (MMR).
- Our facility is carrier-neutral from a local access and long haul perspective.
- Multiple Internet service providers—including tw telecom®, Level 3®, and Verizon® are available.
