## RAM

4 GB or more recommended

### Tip:

Lexis Advance performs well with RAM as low as 1 GB, but if you generally run multiple applications or browser windows simultaneously, this will affect memory and overall performance, so higher RAM is recommended.

## LAN connection

You will need a TCP/IP connection of suitable speed with Internet access.

### Note:

Local area network (LAN) firewalls, proxy servers and network administration software (including virus scanners, other traffic on the network, etc.) may impact performance.
