You know that your questions can be answered with the right documents. But do you know what to search to find those documents easily?

Let LexisNexis® SmartIndexing Technology™ work behind the scenes for you, adding tremendous power to simple search words.

Here’s how. LexisNexis SmartIndexing Technology tags news, business and legislative documents with the topics discussed within them. Because LexisNexis SmartIndexing Technology searches based on topic, you can find information about companies, industries, subjects, people and locations whether or not they are explicitly mentioned in the document.

For example, search with the MERGERS & ACQUISITIONS index term and get on-point references, no matter what words the article uses to discuss mergers. No synonyms needed. No false hits about celebrity weddings or personal shoppers.

Our team of information professionals and subject-matter experts creates, tests and maintains rules and computer algorithms that apply indexing to documents. Index terms tag new documents as they are added to the LexisNexis services—tens of thousands of documents daily.

You reap the benefits of our expertise. It’s as simple as:

1. Selecting one or more terms from the Nexis: Index Term Lookup.
2. Adding the terms to your search request.
Add word power to your research

Find terms in the Nexis® Index Term Lookup

- Sign in to www.nexis.com
- Select the Power Search option under the Search tab

1. Click the Add Index Terms link.

2. In the pop-up window, search for the terms you want to add to your search. You may either search for an index term using the Find feature or browse for an index term using the Hierarchy or Alphabet features. Use the + icon to browse deeper into a category and the - icon to collapse a category.

3. Click the i icon to view additional metadata related to a specific index term such as a term definition and frequently associated terms. For selected company index terms, you may view the corporate hierarchy of parents and subsidiaries.

How to add index terms manually

Type your index terms in the Power Search form in parentheses. Add other search words (non-index terms) as needed outside the parentheses. For example:

- TERMS (osama bin laden) AND date bef 2000
- TERMS (legislation AND affirmative action AND academic admissions)
- TERMS (toxic tort AND reinsurance) AND COMPANY(abcdoughnut)

The index term TERMS checks all document sections that contain index terms. See the following examples to search specific sections:

- SUBJECT (internet crime AND internet auction)
- COMPANY (reed elsevier OR wolters kluwer)
- ORGANIZATION (peta)
- PERSON (tom OR thomas PRE/2 ridge)
- COUNTRY (vietnam AND hong kong)
- STATE (idaho)
- CITY (tripoli)
- GEOGRAPHIC country, state and city;
- GEOGRAPHIC (middle east)

Add terms to your search request

4. Select the checkbox next to a term to add it to your search. Click the OK—Add to Search button when you have selected all the applicable index terms for your search.

5. This will populate the Power Search form with your selected index terms. On this screen, you can change the connectors between index terms, delete index terms, and select index term relevance before launching your search.
LexisNexis SmartIndexing Technology covers:

**CONTENT**

- All English-, German- and French-language newspapers, news wires, newsletters, magazines, journals, transcripts and web content, including:

**How to strengthen your News search with Relevance Scores**

Within news articles on Nexis, a relevance score accompanies each applied index term. Search with relevance scores for greater control over what results are returned. This score is based on the term’s frequency, location in document, and how much discussion of the topics occurs. You can interpret these scores as follows:

- 90% – 99% = major reference
- 80% – 89% = strong passing reference
- 50% – 79% = weak passing reference

Follow these two simple rules when searching with relevance scores.

**Rule 1:** Type the appropriate syntax after the index term. Add #85plus# after the index term to retrieve major references only.

```
subject(trends #85plus# and oil gas industry #85plus#)
```

**Rule 2:** Use the exact form of the index term or, when in doubt, insert a PRE/3 connector before the score.

```
company(kroger pre/3 #85plus#) and state(ohio pre/3 #85plus#)
```

---

**Refine results with terms**

- Results Groups help you analyze your answer sets more efficiently by providing filters for document categories, such as source type, industry, subject, company, person or location. The **Results Groups pane** shows the available categories and the number of documents participating in each category. Click a category to change the documents displayed in the main window. Take advantage of LexisNexis SmartIndexing Technology via the Results Groups feature by using the Subject, Industry, Company, Geography or People group, even if your original search did not incorporate index terms.
LexisNexis® SmartIndexing Technology

**NAMES & TOPICS**

6,080 + subjects English language
2,396 + subjects French language
3,030 + subjects German language

Covering news, business, science and social topics such as Labor & Employment, Law & Legal System, Population & Demographics, Trends & Events and much more.

6,449+ industries English language
2,541+ industries French language
2,945+ industries German language

Covering major industrial classifications such as Banking & Finance, Energy & Utilities, Manufacturing, Retail & Wholesale Trade and much more.

**Total number of unique topics in Industry and Subject combined:** English: 6,101; German: 3,483; French: 3,198

We cover 29 industry categories and 19 subject categories down to six levels deep.

**Company names:** 330,000+
Public and private companies worldwide.

**People names:** English: 4,757; German: 199; French: 237
Worldwide politicians, CEOs of major corporations, sports figures; US Supreme Court Justices; and other newsworthy celebrities.

**Geographic locations:** 1,510+

Besides indexing for English, French and German language, we have further Subject and Industry Indexing for: Dutch, Spanish, Italian, Russian, Brazilian Portuguese and Arabic.

To benefit from this indexing please apply the same rules as described previously.

---

**MULTI-LANGUAGE INDEXING**

A multi-language indexing search is possible via the function advanced index term look-up within our search page. This “word wheel” shows the complete thesaurus used for indexing.

Via our indexing technology, you can select a term from the lookup e.g. in English and get results from sources in these languages (assumed sources in these languages have been chosen): French, German, Dutch, Spanish, Italian, Russian, Brazilian Portuguese, Arabic

Manually typing in subject terms will only find hits when the terms are in the same language as in the content.

**When should LexisNexis SmartIndexing Technology be used for non-English languages?**

Just like English indexing, multi-language indexing adds value to any search run against non-English-language news & business content. Some of the top reasons for using multi-language LexisNexis SmartIndexing Technology include:

- Search non-English-language sources with the same confidence you search English-language sources using LexisNexis SmartIndexing Technology.
- Retrieve relevant articles in French, German, Dutch, Spanish, Italian, Russian, Brazilian Portuguese or Arabic, even if you don’t know the language.
