## DESCRIPTION

LexisNexis Full Service Screening includes the ability to request and receive drug screening reports over the Internet or you can have the information delivered right to any XML-based human resource or security management system.

Working with Pembroke, a leading provider of substance abuse testing management services, you can easily manage comprehensive drug testing programs entirely through LexisNexis.

LexisNexis Drug Screening includes the ability to view test results in multiple formats, find and map collection sites, as well as review and monitor random selection and compliance.

## FEATURES AND BENEFITS

**Requested online.** Drug screening requests can be made anywhere and at any time across the nation using Full Service Screening.

**Implements highest testing standards.** Pembroke uses laboratories that follow the preferred confirmatory method to ensure accurate results: gas chromatography/mass spectrometry (GC/MS).

**Returns comprehensive results in one report.** Now all your background check results can be summarized in one place. Instead of working with multiple vendors, LexisNexis can be your one-stop shop.

## FAQS

### *Who is Pembroke?*

Founded in 1989, Pembroke Occupational Health Inc. is a leading North American provider of substance abuse testing management services. The company provides substance abuse testing management services to a broad range of industries covering every federally regulated modality of testing.

### *What if there isn't a collection site near our business?*

Pembroke has collection sites located across the country. To locate a collection site that is more convenient for your office or your applicant, we are willing to research additional collection sites based on your needs.

## TYPICAL RESULTS

A drug screening report will list any positive drug screening findings for a 5- or 10-panel test

### 5 Panel

- Amphetamine
- Cocaine
- Marijuana (THC)
- Morphine/Opiates
- Phencyclidine (PCP)

### 10 Panel

- Amphetamine
- Barbiturates
- Benzodiazepines
- Cannabinoids
- Cocaine
- Methadone
- Methaqualone
- Opiates
- Phencyclidine (PCP)
- Propoxyphene
