General Searching

A few basic notes:

- A term or word is any series of letters or numbers with a space on either side (contract or $1,234, for example).
- Singular, possessive, and plural forms are found automatically, if the plural or possessive ends with s, ’s, es, or ies.
- Some common equivalents are found (cal finds Calif and California, for example).
- A hyphen is read as a space.
- Use the @ symbol for the section symbol used in citations (Section 305 = @ 305 or @305).

Types of Searching

Using Terms and Connectors

Terms and Connectors searching (Boolean search logic) uses words and connectors to create phrases and concepts. Here’s an example of a Terms and Connectors search: drug /15 test! OR screen! /10 employ!

Universal characters replace letters in your search terms:

<table>
<thead>
<tr>
<th>CHARACTER</th>
<th>EXAMPLE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>!</td>
<td>litigat! finds litigation, litigate, litigator</td>
<td>Replaces any number of letters after a word root—use only one ! per word at the end of the word</td>
</tr>
<tr>
<td>*</td>
<td>wom<em>n finds woman or women bank</em>** finds banked or banking, but not bankruptcy</td>
<td>Replaces one letter in a word—you can use more than one * in a word, anywhere except as the first letter</td>
</tr>
</tbody>
</table>

Connectors establish a logical connection among search terms, operating left to right in this order:

<table>
<thead>
<tr>
<th>CONNECTOR</th>
<th>EXAMPLE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR</td>
<td>doctor OR physician</td>
<td>Finds documents containing any of the terms or phrases connected by OR</td>
</tr>
<tr>
<td>/n</td>
<td>market /5 share</td>
<td>Finds two search words in the same document within n words of each other (n = any number from 1 to 255)</td>
</tr>
<tr>
<td>/s</td>
<td>circumstances /s mitigating</td>
<td>Finds words in the same sentence</td>
</tr>
<tr>
<td>/p</td>
<td>rule /p sanction</td>
<td>Finds words in the same paragraph</td>
</tr>
<tr>
<td>AND</td>
<td>bank! AND deregulat!</td>
<td>Finds documents containing all terms or phrases connected by AND</td>
</tr>
<tr>
<td>PRE/n</td>
<td>cable PRE/2tv OR television</td>
<td>Finds documents in which the first word precedes the second within the specified number of words</td>
</tr>
</tbody>
</table>

Tip: The connectors /s and /p cannot be used with the connector /n.

Precision search commands help you form even more precise search requests:

<table>
<thead>
<tr>
<th>COMMAND</th>
<th>EXAMPLE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>atleastn</td>
<td>atleast10 (cercla)</td>
<td>Finds documents that mention your term (CERCLA, for example) at least n times: searches for documents with significant coverage of your topic. Use any number from 1 to 255.</td>
</tr>
<tr>
<td>allcaps</td>
<td>allcaps (aids)</td>
<td>Finds words in all capital letters (AIDS and not aids, for example)</td>
</tr>
<tr>
<td>nocaps</td>
<td>nocaps (aid)</td>
<td>Finds words that include no capital letters (aid or aids, but not AIDS, for example)</td>
</tr>
<tr>
<td>caps</td>
<td>caps (jobs)</td>
<td>Finds words that are initial-capped (Jobs [as in Steve], but not jobs [as in jobs market], for example)</td>
</tr>
<tr>
<td>plural</td>
<td>plural (jobs)</td>
<td>Finds plural forms only (Jobs [as in Steve] and jobs [as in jobs market], but not job [as in job creation], for example)</td>
</tr>
<tr>
<td>singular</td>
<td>singular (job) /5 discrimination</td>
<td>Finds singular form only</td>
</tr>
</tbody>
</table>

Segments help you restrict your search to specific parts, or segments, of documents, such as the headline of a news article or the heading of a case:

<table>
<thead>
<tr>
<th>SEGMENT</th>
<th>EXAMPLE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>NAME</td>
<td>name (roe AND wade)</td>
<td>Finds all cases in which a particular person or entity was a party</td>
</tr>
<tr>
<td>WRITTENBY</td>
<td>writtenby (scalia)</td>
<td>Finds all decisions—majority, concurring, and dissenting—written by a particular judge</td>
</tr>
<tr>
<td>DATE</td>
<td>date is 3/3/2005</td>
<td>Finds decisions issued on, before, or after the specified date, or within a specified date range</td>
</tr>
<tr>
<td>HEADLINE</td>
<td>headline (oil /5 spill!)</td>
<td>Finds articles with your search terms in the headline</td>
</tr>
</tbody>
</table>

Tip: You can choose segments relevant to any source from the pull-down list on the search form. (See the “Using the Basic Search Form” section on page 10.)
Using Natural Language

Natural Language searching uses “plain English” questions or phrases. Here’s an example of a Natural Language search:

*Can employment drug screening be a contract arbitration issue?* Use Natural Language to research conceptual issues rather than specific topics or when you’re searching complex issues and are unsure of the words to use. Your search results will appear ranked by relevance.

Using Easy Search™

The Easy Search feature lets you enter search terms to run a quick search. You need not use any particular search syntax (either Terms and Connectors or Natural Language), but if you don’t, the LexisNexis services can detect which type of search to perform. You can use quotation marks for phrase searching. When you use the Easy Search feature, up to 250 documents will display in an expanded Cite view, with your search terms in bold.
