## LexisNexis SmartIndexing Technology™

LexisNexis SmartIndexing Technology™ ensures relevant results by applying controlled vocabulary terms for several different taxonomies to all LexisNexis news and business content. The Source Selection tool includes such attributes as publication type, language, geographic region and topic coverage.

LexisNexis SmartIndexing Technology taxonomies are built and maintained by the LexisNexis Taxonomies and Indexing team, which consists of information professionals, lawyers, subject matter experts and analysts. The team also develops rules for index terms, which are assigned automatically to documents and sources, using a unique approach that combines the best features of human and automated indexing practices. All news and business content is reindexed every quarter to ensure that indexing is consistent, comprehensive and up to date.

## Results Clustering

Results clustering technology provides an instant, multi-faceted analysis of the distribution of hits in each results set, allowing users to filter results and go directly to relevant information. After running a search in LexisNexis Academic, and obtaining results that contain more than one hit, results are displayed similar to the screen shown below.
