The LexisNexis® Web Services Kit gives you fast access to millions of current and historical documents from thousands of publications. We host the data, meaning you focus on what matters to you most, from specific inquiries to custom searches.

All The Data You Need
No Hosting Required

With LexisNexis, you leave the hosting to us. Just answer specific queries with relevant data sets.

- Find critical information. Get to reliable sources quickly and grab the data sets that you define from news, legal, business, industry, regulatory and court content.
- Access what you need, when you need it. We give you access to the Web Services Kit server, putting the ability to start a query and receive just the content you need immediately in your hands.
- Drive your own decisions. You make the decisions on the data you receive. You can access any data you want from our aggregation system and search for results from today, yesterday, or 35 years ago.

Simply Integrate Data into Your Workflow

We give you fast access to retrieved documents, meaning you can always rely on your data, tomorrow or 10 years from now.

- Resurface data when you need it. The articles you pull have a unique ID attached so you can use this code to find the same results time after time.
- Share with your users. You can collaborate across your team by giving them access to LexisNexis data. Create custom research utilities and embed them into your own online systems. Team members can retrieve information from our library of resources whenever they need it.
- Manipulate retrieved information. Your research results are transmitted to your systems in SML, making it simple to reformat, display and use in follow-up requests.

Make the Most of Your Investment

Avoid the real costs associated with data storage. We secure, monitor, manage and grow the data—all you have to do is use it. It’s the smart financial move for fiscally-minded organizations.

- Save time and money. We do the hosting so you don’t have to spend budget on security, monitoring and managed IT services for your data storage.
- Rely on trusted support. Rest assured your implementations will be smooth and streamlined with our dedicated LexisNexis project team. We support every phase, from planning to rollout. Our experts give you rapid responses to queries and help with test runs that are designed to ensure quality results for your application.
- Enjoy flexible development. Easily switch between development areas. We supply new endpoint, URLs, IDs and passwords in each phase so you can build your application smoothly.
