STATE NET® XML DATA FEEDS

Oversight of your data, not oversights in your data

Integrate and streamline your LexisNexis® State Net® data across all your processes and systems.

It's hard enough just to keep up with the day's email, let alone monitor changing regulations for your entire organization. You can't afford to miss an important development. But when compliance means sinking hours into screen time and spreadsheets, you could be risking costly mistakes.

IT'S TIME TO AUTOMATE.

LexisNexis® State Net® offers XML data feeds to deliver legislative and regulatory data directly to your existing database or GRC application. Manage exactly how your data reaches you—and how it reaches your stakeholders—without all the typing.

RELY ON QUALITY REPORTING FROM EXPERIENCED EDITORS.

This isn't a basic scrape from a state legislative website—it's state of the art legislative and regulatory monitoring. Your daily data feed is built around State Net® proprietary content, with critical enhancements to save you time.

- Our editors provide each record a **meaningful title and summary**, so you can instantly assess whether it's relevant to your industry or agency.
- **Bill and regulatory text markup are uniform** across federal and state jurisdictions, so data formatting is always consistent and you know what's included.
- **Status actions are also normalized**, so you can tell where a bill is—from introduction to enactment—even when legislative procedures vary from state to state.

GET MORE INTELLIGENCE CUSTOMIZED FOR YOU.

Choose from legislative, regulatory and related regulatory document data feeds. We can work with you to tailor your feed to your specific needs. It's like having your own personal legislative and regulatory monitoring solution.

- Receive **new activity** updated each night and delivered daily for tracked items such as new bill actions, ballot measures and executive orders.
- Get links to **all versions of legislative or regulatory text**, plus related intelligence.
- Monitor the details: We provide at least **16 different legislative data elements** for each bill and 11 data elements for each regulation.
- Annotate and organize your feed even further with **tags, categories and notes**.
- Save time and cut costs by using our tools to create **customizable reports,** based on your preferences and share them with stakeholders or colleagues.

Learn more about the time and effort you can save with State Net XML data feeds. Put data entry where it belongs—on the other side of the screen.
